Part 2: Classification Results Report

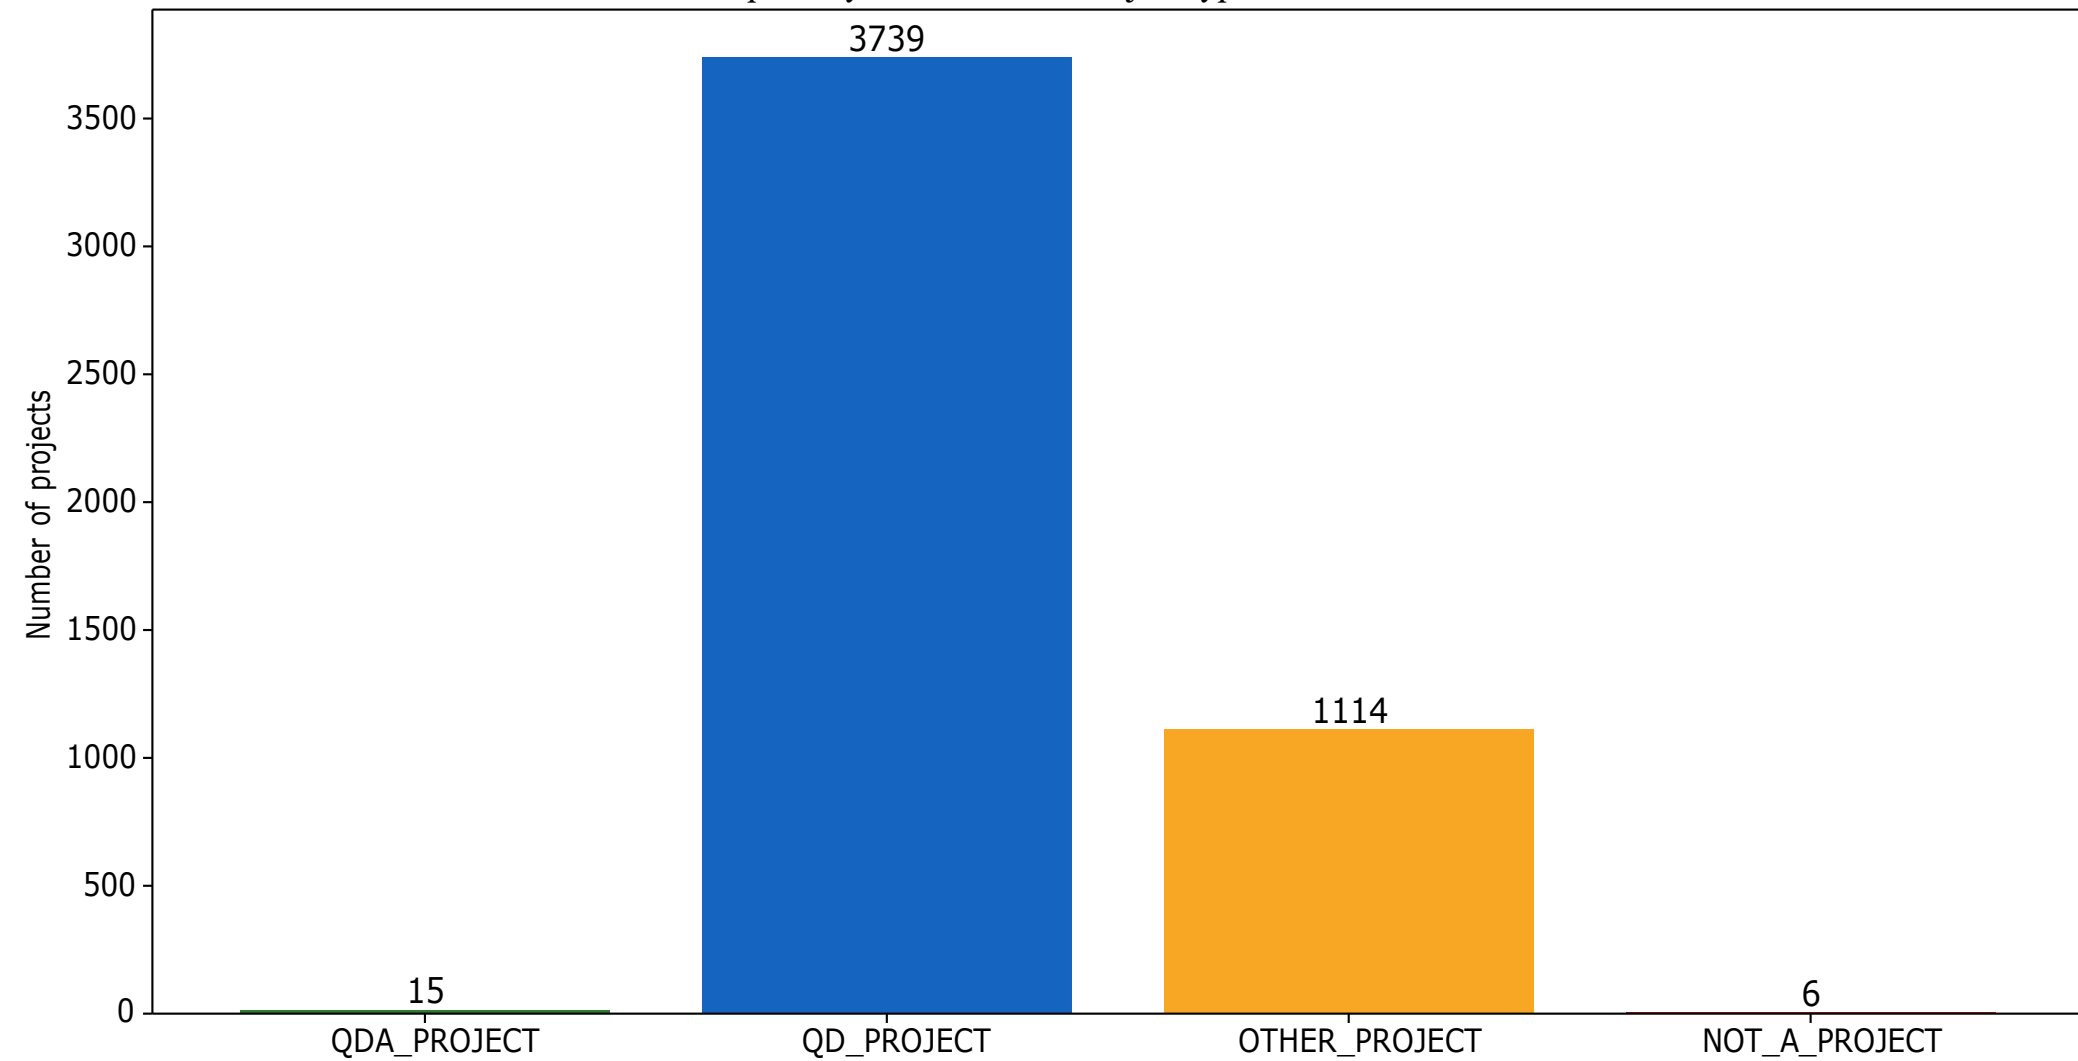

Student ID: 23129103

FAU Erlangen-Nürnberg

Repositories: 5 dans, 16 open-data-uni-halle

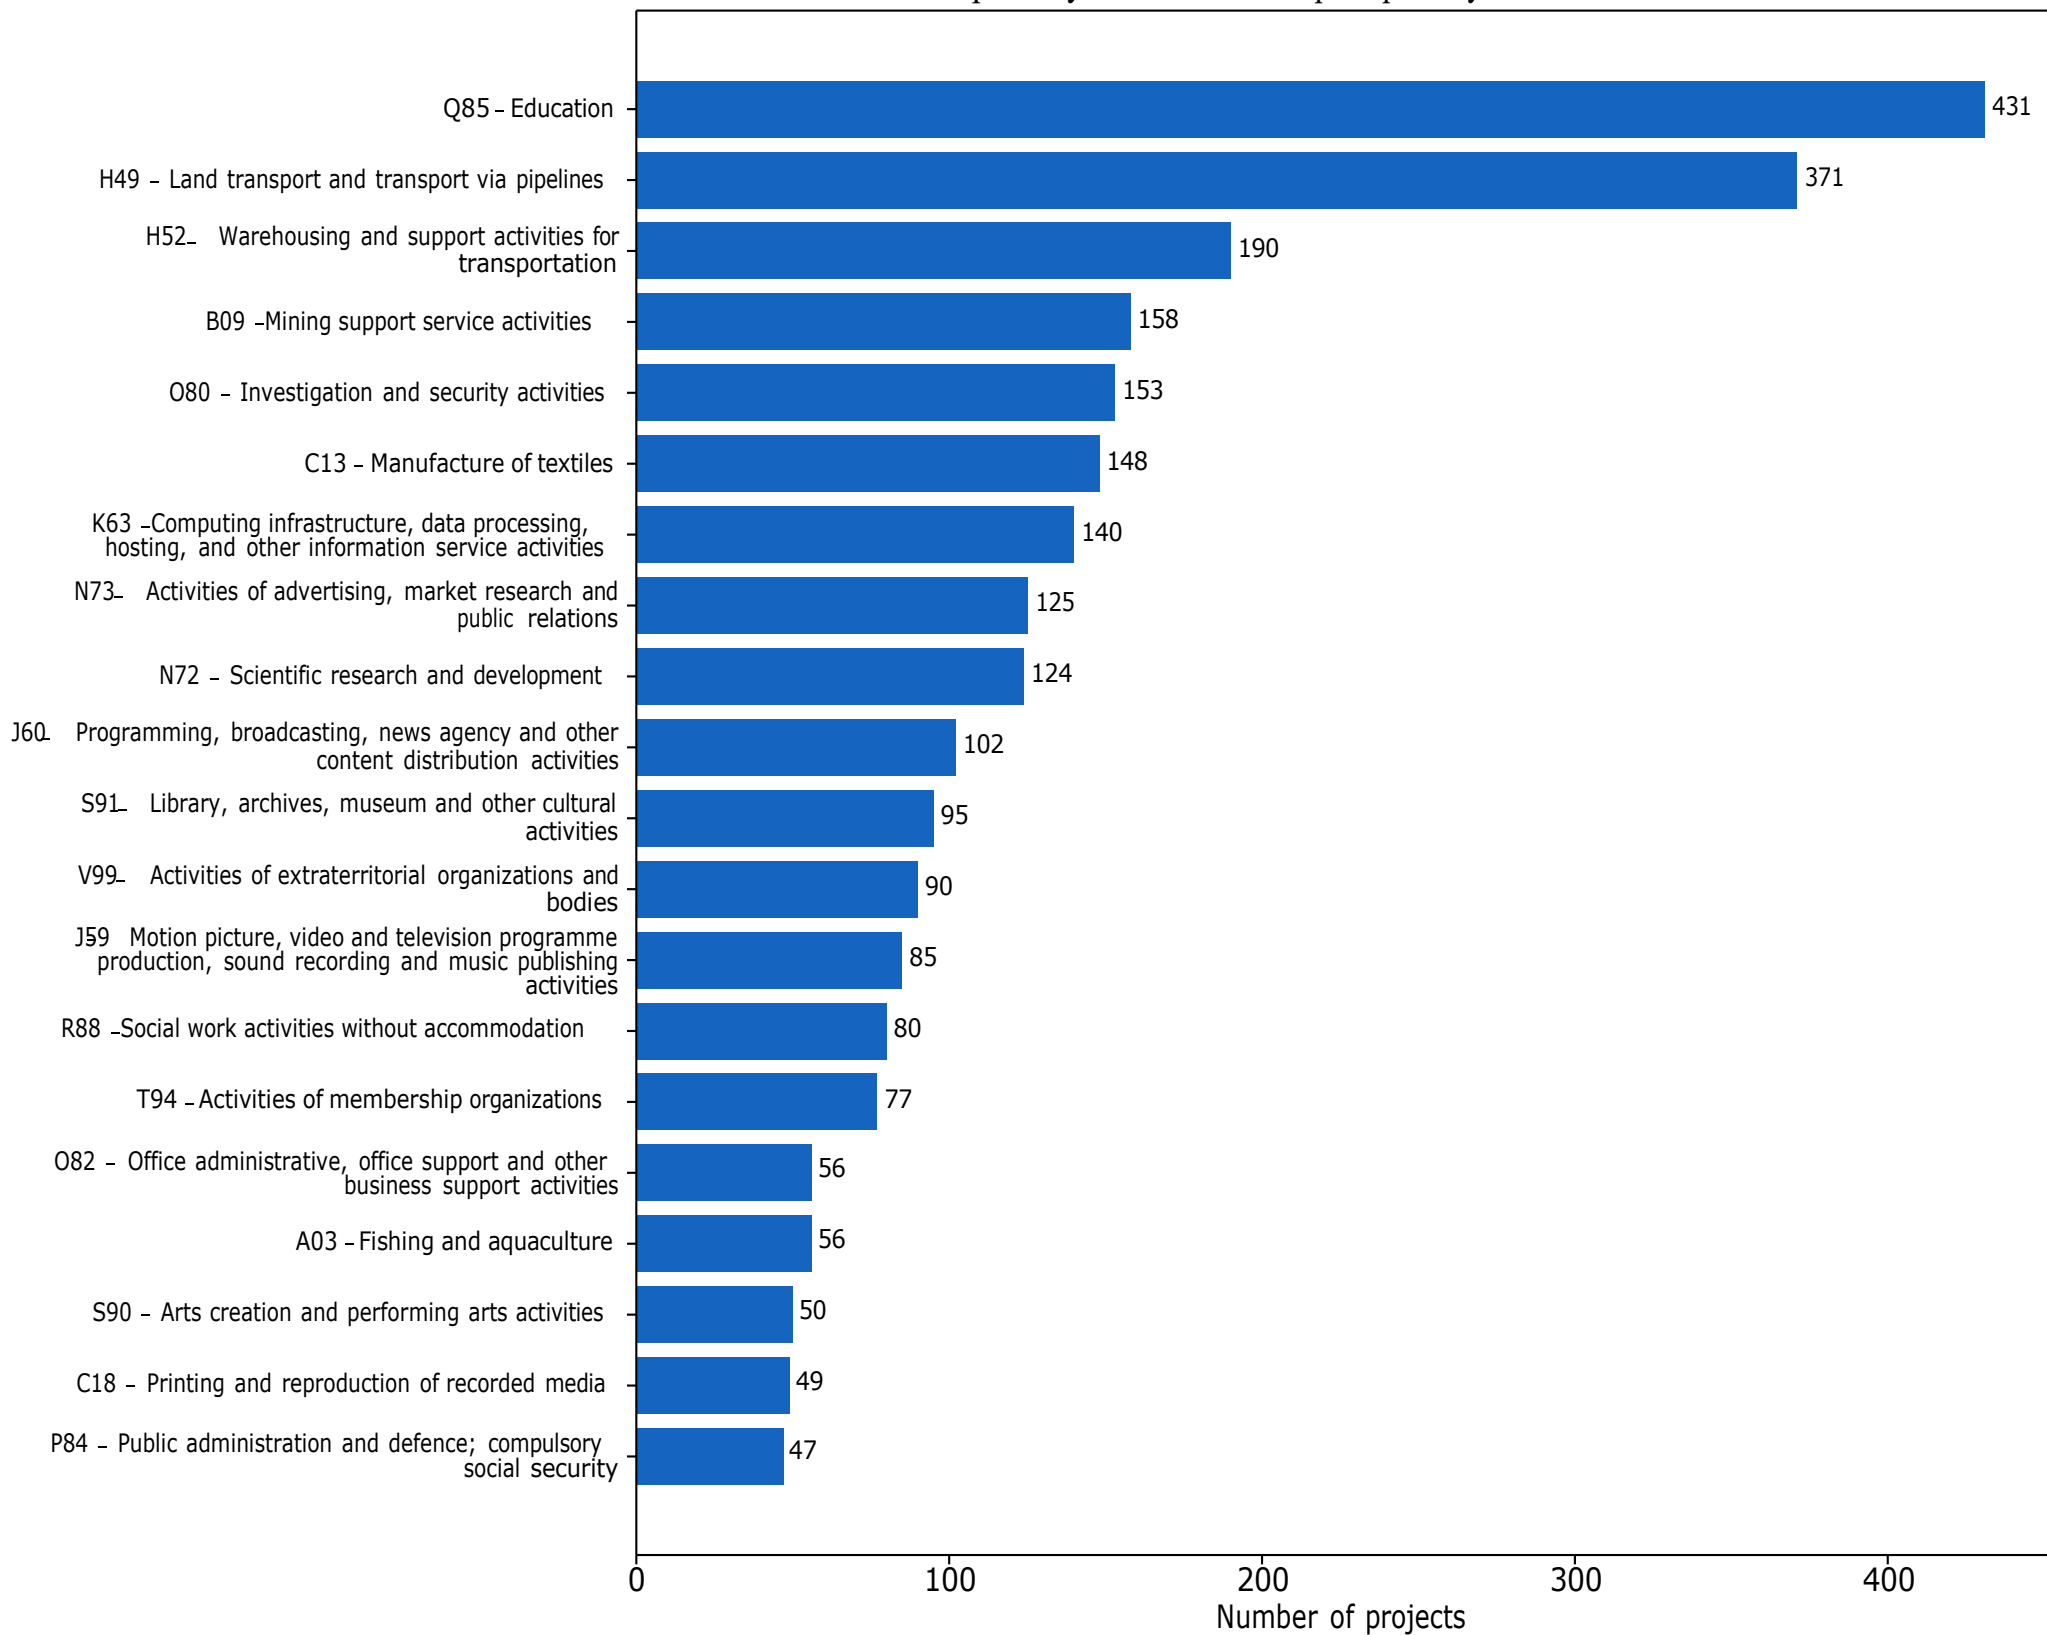

Repository: dans

— Project type distribution

Repository: dans

— Top 20 primary ISIC classes

Repository: dans — Rank-ordered top 20 classes

Rank	ISIC class	Count	% of classified
1	Q85 Education	431	11.5%
2	H49 Land transport and transport via pipelines	371	9.9%
3	H52 _ Warehousing and support activities for transportation	190	5.1%
4	B09 _ Mining support service activities	158	4.2%
5	O80 _ Investigation and security activities	153	4.1%
6	C13 _ Manufacture of textiles	148	3.9%
7	K63 _ Computing infrastructure, data processing, hosting, and other information serv	140	3.7%
8	N73 _ Activities of advertising, market research and public relations	125	3.3%
9	N72 _ Scientific research and development	124	3.3%
10	J60 _ Programming, broadcasting, news agency and other content distribution activiti	102	2.7%
11	S91 _ Library, archives, museum and other cultural activities	95	2.5%
12	V99_ Activities of extraterritorial organizations and bodies	90	2.4%
13	J59 _ Motion picture, video and television programme production, sound recording a	85	2.3%
14	R88 _ Social work activities without accommodation	80	2.1%
15	T94_ Activities of membership organizations	77	2.1%
16	O82 _ Office administrative, office support and other business support activities	56	1.5%
17	A03 _ Fishing and aquaculture	56	1.5%
18	S90 _ Arts creation and performing arts activities	50	1.3%
19	C18 _ Printing and reproduction of recorded media	49	1.3%
20	P84 _ Public administration and defence; compulsory social security	47	1.3%

Repository: dans — Comments

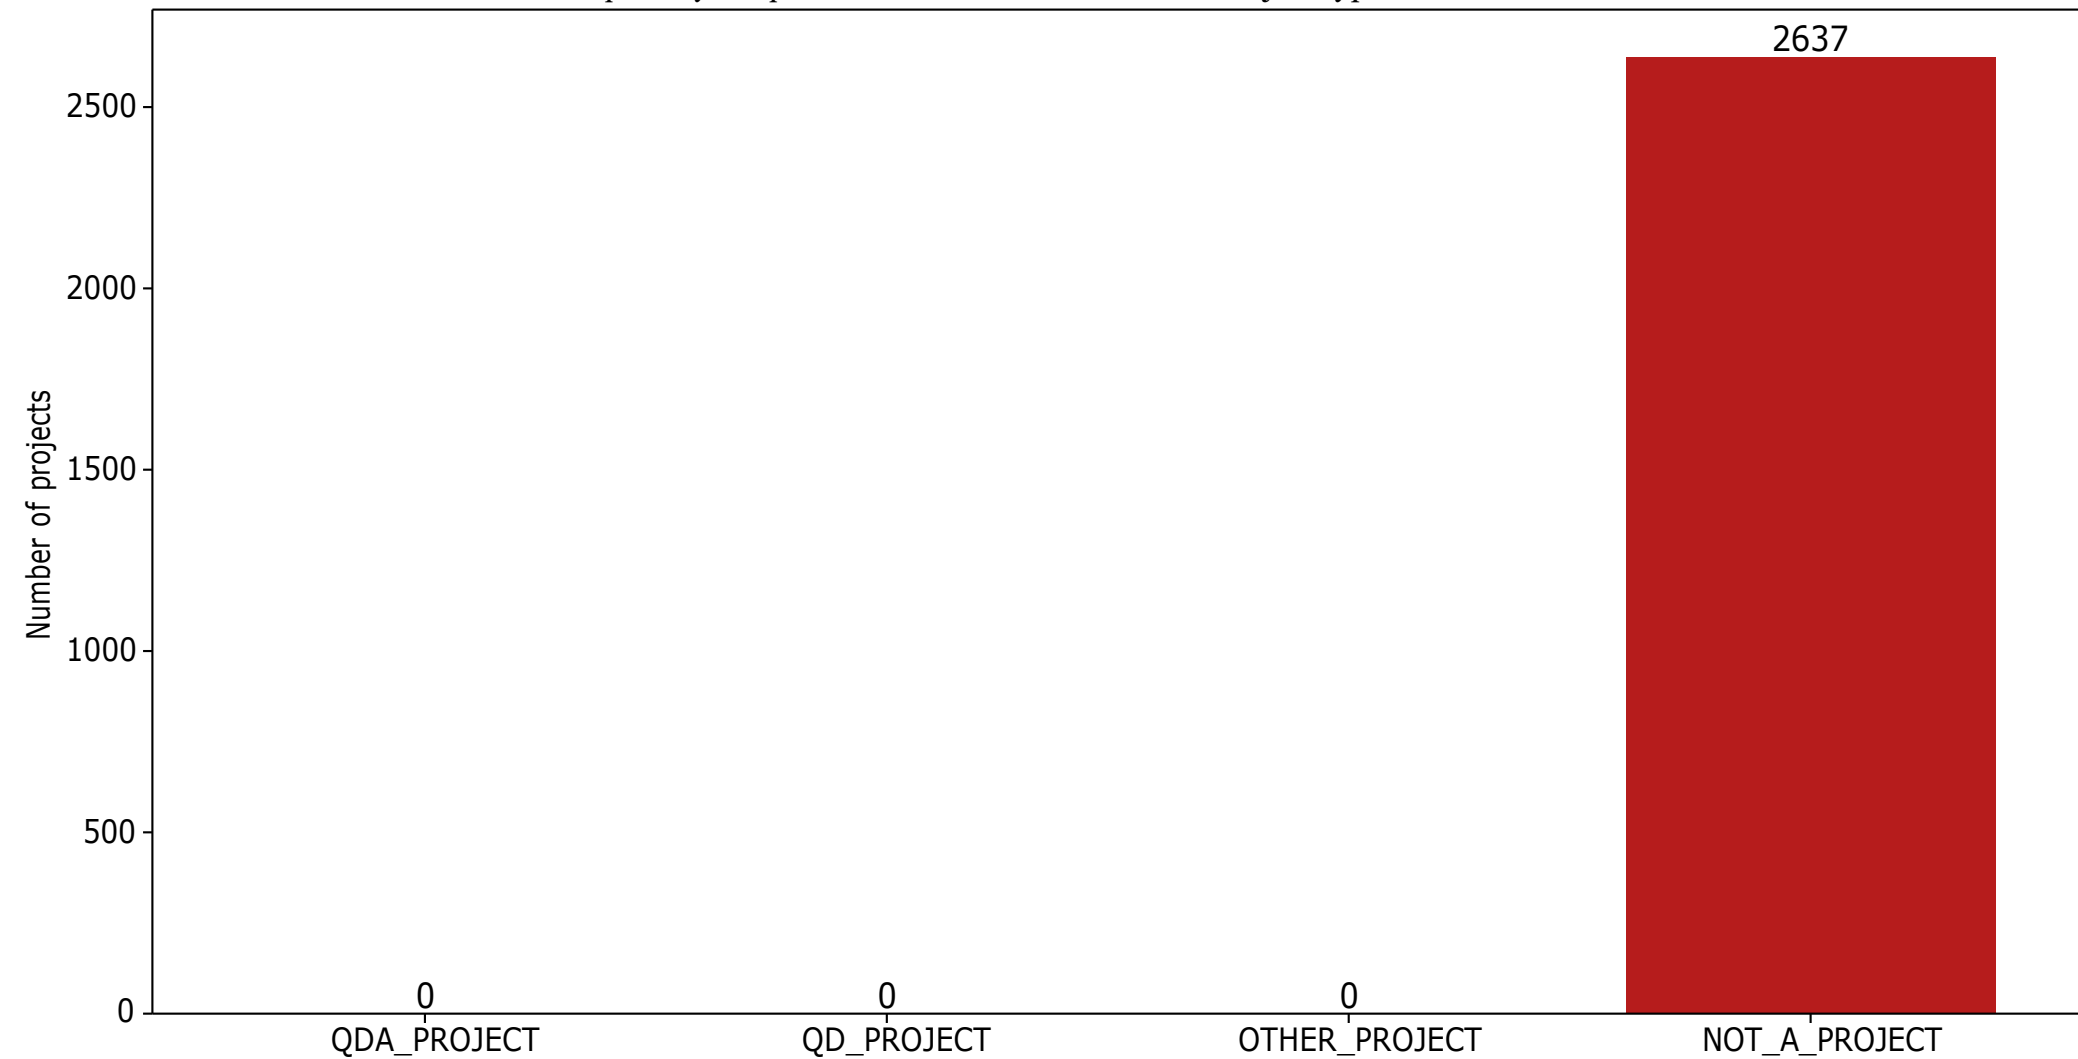

Education (Q85) is by far the most common primary class for DANS projects, consistent with the repository's strong base of interview and life-history studies conducted in academic/educational settings.

Several high-ranking classes (H49 Land transport, H52 Warehousing, B09 Mining support) look implausible for qualitative interview data at first glance. Because classification here is TF-IDF text matching between project title/description/keywords and the ISIC division reference text, short or generic titles with little descriptive text are prone to matching on incidental vocabulary overlap rather than true subject matter - a known limitation of a metadata-only classifier, flagged here as a data-quality issue rather than smoothed over.

15 projects were classified as QDA_PROJECT (contain an actual REFI-QDA / MaxQDA / ATLAS.ti analysis file); the remaining classified projects are QD_PROJECT (primary data files present, but noanalysis-software file).

Repository: open-data-uni-halle

— Project type distribution

Repository: open-data-uni-halle

No classifiable projects (QDA_PROJECT / QD_PROJECT) with a primary class were found for this repository— see comments.

No histogram or top-20 table is shown for this repository because almost all projects were classified as **NOT_A_PROJECT**. According to the classification rules, only **QDA_PROJECT** and **QD_PROJECT** records are eligible for ISIC classification. The available metadata and file information for the acquired Uni Halle projects did not provide sufficient evidence to classify them into these categories. Consequently, no ISIC classes were assigned for this repository. This reflects the characteristics of the acquired dataset rather than an issue with the classification procedure.
